DAYTON MOTORCYCLE CLUB

In May, our team was able to bring the V2 car to the Dayton Motorcycle Club for a day of field testing. Getting hands-on time on the track, outside of competition was a very valuable experience for the team. It gave us a great environment to test our latest design changes, troubleshoot remaining issues, and give our new members some time behind the wheel. Big thanks to Dayton Motorcycle Club!

SUMMER WORKDAYS

Even with full summer schedules, internships, and long commutes, our team members made time to gather back in the shop. Getting everyone together in person allowed us to stay up to date and on schedule with both the car and team.

V3 DESIGN PROGRESS

Our team is currently deep in the design phase for the new V3 car. All of our subteams are meeting regularly and working hard to build on everything we learned from the V2 car. We are excited to build our most competitive car yet!

METALLUS

Huge thanks to Metallus for supplying aerospace-grade steel for our V3 gears. This premium material will give us great strength and reliability on the track!

Summer Internships

Our team got valuable workplace experience through summer internships and co-ops! Our members had the opportunity to intern at the following companies:

CROWN

BasTech
MAKING THE FUTURE

TECHMETALS
ENGINEERED METAL FINISHING & PERFORMANCE COATINGS

EATON

GOSIGER
SERIOUS SOLUTIONS

HONDA

**University of Dayton
Research Institute**

LEONARDO DRS
